

This project was applied MVVM architecture like below:

I use Retrofit response caching to cache fetched data and it able to fetch old data when device offline. That why this app no need use database.

Done:

- Search screen with input field
- Search results with result found by user's input
- User able to see user's common info by click on result item

- Using proguard & minify enable true to protect release build avoid decompile apk.
- Some basic unit test included

Principle applied:

- Single Responsibility
- Interface Segregation
- Dependence Inversion
